COMMERCIAL & TECHNOLOGY AUDIT

# Dismex Food

Wholesale Importer & Distributor of Latin Foods · Miami, Florida

A commercial & technology audit quantifying where revenue, hours and margin leak — and how to recover them on top of what you already run.

**Prepared by Selenia Sánchez**

Systems Consulting B2B · CRM · Automation · AI · August 2026

## 01 Executive summary

Dismex Food is a family-owned importer and distributor of Hispanic and Latin American specialty foods, based in Miami and serving all of Florida since 1989 (36 years). It runs a 2,000+ SKU catalog of dry and refrigerated goods, imports directly from Mexico, Guatemala, Honduras and Colombia, and delivers with its own fleet to independent stores, chains, convenience stores and restaurants.

The business is solid and established, but its digital layer is minimal: a dated website (content from ~2017), no e-commerce or B2B portal, and every order taken by phone, email or a field rep. That gap — a real book of business run on manual processes — is exactly where a light software layer multiplies what they've already built. Figures below are illustrative estimates with stated assumptions, to confirm in the audit.

**ESTIMATED LEAK (illustrative · to confirm in the audit)**

**Thousands of staff hours/year taking orders by phone & email, a 2,000-SKU catalog that's under-sold because no one can browse it, and revenue quietly lost when customers reduce or stop ordering.**

› Reps taking orders by phone/email instead of selling → hundreds to thousands of hours/year in transcription.
› With 2,000+ SKUs, only the 'usual' items sell; the long tail stays invisible in phone orders.
› In a recurring-order business, 5-10% of customers reduce or drop off each year with no alert.
› Illustrative figures; the exact number comes from their real data in the audit.

## 02 Business model — how they make money

- **What they sell:** 2,000+ SKUs of Mexican & Central-American dry and refrigerated specialty foods & beverages.
- **Who they serve:** independent grocers, chains, convenience stores and restaurants across Florida (B2B wholesale).
- **Coverage:** statewide Florida, with an owned fleet and a Miami distribution center.
- **Scale:** family business since 1989 (36 yrs), ~28 employees, direct importer (confirmed via customs records).

## 03 How they get customers

- Orders taken by phone (305-238-6146), email (Sales@dismexfood.com) and field reps — all manual.
- Dated website (~2017), no e-commerce, no B2B portal, no live catalog or pricing.
- Minimal/inactive social presence; no internal IT roles visible.

## 04 Digital presence & tech observed

PUBLIC SOURCES ONLY · WHAT CAN'T BE VERIFIED IS MARKED «NOT OBSERVABLE»

| TOOL | STATUS | OBSERVATION |
|---|---|---|
| Website | Confirmed (dated) | ~2017 content, not responsive; brochure only. |
| E-commerce / B2B portal | Not found | No login, cart, pricing or self-service ordering. |
| Order taking | Confirmed (manual) | Phone / email / field rep only. |
| ERP / inventory | Not observable | No web-to-inventory link; likely basic system or spreadsheets. |
| CRM | Not observable | No sign of a customer follow-up system. |
| Internal IT / LinkedIn | Not found | No tech roles; ~124 followers. |

## 05 Where they're losing money

LEAK POINTS DETECTED FROM OBSERVABLE SIGNALS

- 100% manual order taking → admin overload, transcription errors, office-hours only, reps taking notes instead of selling.
- No self-service catalog → 2,000+ SKUs impossible to show by phone; the long tail is under-sold.
- Perishables + container imports with no real-time inventory → overstock (shrink) or stockouts (lost sales).
- Fleet routing likely manual → extra miles, fuel and hours across statewide delivery.
- Dormant customers → drop-offs go unnoticed with no purchase-frequency data. Silent revenue leak.

## 06 Prioritized opportunities

BY ECONOMIC IMPACT AND EASE OF IMPLEMENTATION

| OPPORTUNITY | WHAT IT SOLVES | IMPACT | PRIORITY |
|---|---|---|---|
| B2B ordering portal | Customers order 24/7 from the full catalog; reps stop transcribing | More sales / hours | VERY HIGH |
| CRM + dormant-customer alerts | Detects and recovers customers who slow down | Revenue recovery | VERY HIGH |
| Real-time inventory + demand forecast | Less shrink on perishables and fewer stockouts | Fewer errors | HIGH |
| Route optimization | Fewer miles and fuel on statewide delivery | Logistics savings | HIGH |

| OPPORTUNITY | WHAT IT SOLVES | IMPACT | PRIORITY |
|---|---|---|---|
| Cross-sell recommender | Activates the long tail; higher average order | More sales | MEDIUM |

## 07 Leak quantification (CFO view)

ESTIMATE WITH ASSUMPTIONS · INVESTMENT IN TIERS ($ low · $$ mid · $$$ high), TO BE DEFINED

| PROBLEM | IMPACT | EST. ANNUAL COST | SOLUTION | IN V. |
|---|---|---|---|---|
| Manual order taking | Hours + errors | Hundreds–thousands hrs/yr | B2B ordering portal | $ $ |
| Under-sold long tail (2,000 SKUs) | Lost sales | Variable | Self-service catalog + cross-sell | $ $ |
| Perishable shrink / stockouts | Lost product + lost sales | Variable | Real-time inventory + forecast | $ $ |
| Dormant customers | Lost recurring revenue | 5-10% of book | CRM + alerts | $ |
| Manual routing | Fuel + hours | Variable | Route optimization | $ |

## 08 Hidden opportunities (AI & data)

WHAT ALMOST NO CONSULTANCY LOOKS AT

- Reorder engine that predicts when each customer should reorder each SKU and flags frequency drops.
- Demand/shrink forecasting for imports and perishables to cut waste and stockouts.
- Assortment recommender ('customers who buy X also buy Y') to lift average order and activate the long tail.

## 09 What we cover in the free audit

INTERNAL AREAS AREN'T PUBLIC — THIS IS THE NO-COST DISCOVERY

- How orders are actually taken and entered today.
- What back-office/inventory system (if any) they run, and what's disconnected.
- Where perishable shrink and stockouts originate.
- Which customers have quietly reduced volume.
- From that: the exact $ leak and a phased ROI roadmap.

## 10 Phased proposal

Approach: **build on top of what exists**, highest impact and lowest effort first.

**PHASE 1 · VERY HIGH — Fix the commercial layer**

B2B ordering portal + CRM with dormant-customer alerts.

**PHASE 2 · HIGH — Inventory & delivery**

Real-time inventory/forecast + route optimization.

**PHASE 3 · MEDIUM — Growth**

Cross-sell recommender + reorder automation.

## 11 Entry angle

> *«After 36 years you've built a rock-solid book of business across Florida — but taking every order by phone and email quietly costs you two things: reps who transcribe instead of sell, and customers whose orders slip without anyone noticing. I help distributors like Dismex plug those leaks with a simple B2B ordering layer and a 'dormant customer' alert — on top of what you already run, no rip-and-replace.»*

## 12 Arguments for decision-makers

**CEO (Gerardo Cuadra):** Recover revenue you're already losing and scale the catalog without adding headcount.

**CFO:** Fewer admin hours, less perishable shrink, faster collections — it pays for itself with today's leaks.

**Sales lead:** Reps stop taking notes and go back to selling; the full 2,000-SKU catalog sells 24/7.

## 13 Summary: findings & solutions

| AREA | FINDING | SOLUTION |
|---|---|---|
| Orders | Phone/email/rep, manual | B2B ordering portal |
| Catalog | 2,000 SKUs invisible by phone | Self-service catalog + cross-sell |
| Inventory | No real-time view; shrink | Inventory + demand forecast |
| Customers | Drop-offs unnoticed | CRM + dormant alerts |
| Delivery | Manual routing | Route optimization |

## 14 Conclusion

Dismex has the hard part: 36 years, direct import relationships and a statewide book of business. What's holding it back is purely operational — orders and inventory run by hand while the catalog and customer base keep growing.

Adding a B2B portal, CRM and inventory intelligence on top of what they have is low-risk, high-return, because it monetizes demand that already exists.

## Let's start with a no-cost initial audit

We map your real process and hand you the exact $ leak and an ROI roadmap. No obligation.
